The EXPLORER chassis is designed to achieve great performance with medium-hard compound tyres. Its frame is composed entirely of Ø32 tubing. This gives flexibility and stability to the frame, enabling excellent grip without compromising smoothness.

The magnesium version makes the frame lighter and guarantees more consistent performance, especially in seasons with high temperatures. It is particularly suitable for tracks with little grip. In addition, the magnesium bearing shells favour load transfer in bends. It is particularly suitable for tracks with little grip.
